TRANSPARENT NI-2

OFFERS OPTIMAL VISIBILITY TO
FACILITATE PIGLET INSPECTION

In its efforts to continuously improve farmers' profitability, Rotecna launches a new model of its two types of Ni-2, the covers designed to protect newborn piglets.

The new transparent design allows perfect visibility of the interior of the hog pen and facilitates the control of piglets during their first days of life, without having to access the interior and open the lid manually, which reduces the likelihood of cross-contamination between maternity pens through the feet.

ADVANTATGES TRANSPARENT NI-2

- Facilitate the control of piglets without having to access the interior.
- Optimal visibility of the interior of the hog pen.
- Reduce the likelihood of cross-contamination between maternity pens.

COMMON ADVANTATGES OF NI-2

- Reduces energy consumption in farrowing pens by 20% to 40%.
- More and heavier piglets per birth by reducing the mortality rate.
- Increased feed intake by the mother.
- Increase in weight of piglets during weaning.
- Optimizes climate needs of piglets and protects them from drafts.
- Can reduce the ambient temperature of the room, making the mother more comfortable.
- Easy to clean, as it can be lifted to access the bottom.
- Upper opening for the positioning infrared lamp or LED cover.
- Isolates the mother from the lamps' heat.
