EVO:

do you have any **new** Idea?

We believe what really matters are ideas.

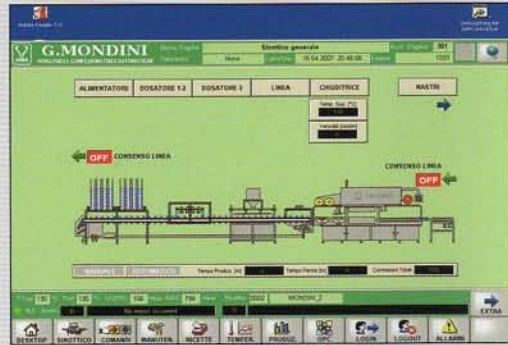

That's why we created a machine so flexible to handle the widest range of packaging formats, prepared to receive the new ones the industry is working on and, most important, ready to develop any ideas you may have about your product!

Mechanical:

► reliable ► consistent ► powerful

Years of proven top quality performances demonstrate how our mechanical seal force generator is the best solution for traysealing.

Cycle after cycle, year after year it generates several tons of sealing force with unbeatable consistency and reliability.

Maintenance is a mere matter of greasing, which is handled by a centralized system.

The unique power of our system delivers outstanding performances in terms of low sealing time and seal through contamination granting the best possible seal result.

Simplicity is troubleless.

Tools are the most stressed and the most sensitive part of a tray sealer. That's why we made it as simple as possible reducing the number of moving parts and the amount of components.

Most important, we completely eliminated the need of air actuators and the use of multi heating elements to increase the reliability and the ease of maintenance, which simply becomes a matter of blades and easy access seals replacing.
