

SLATS AND MULTIROLL COMPONENTS

They are made of extruded aluminum. The different components of the shutter are manufactured and assembled with high quality materials.

SECURITY

By design, this is the unique adjustable rolling shutter that cannot be manipulated once in its closed position.

BETTER ENVIRONMENT

Added to its easy way of operation, it creates a beautiful environment in rooms, dining rooms and balconies.

Boxes

FUSSION: 1,6mm extruded aluminum outside [6063-T0 alloy] and double partition PVC inside.

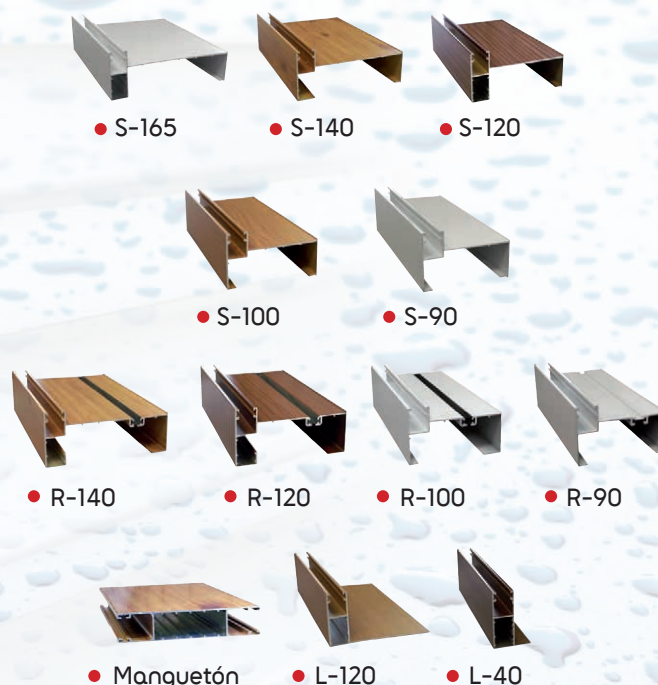

ROLLING CAPACITIES	Material	Box [cm]	High [cm]	Material	Box [cm]	High
	Sheet	15	80	PVC	15,5	80
	Sheet	16,5	105	PVC	18,5	135
	Sheet	18	135	PVC	20	165
	Sheet	20,5	200	Fussion	22,5	210
	Sheet	25	275	Fussion	27	320
	Sheet	30	375			

Maximum width of 2,00 mts

Drivers

Guides

Driving

- Cable and remote driving capabilities at the same time [this avoids any jammer close to your house]
- Centralization WITHOUT WIRES

Internal rolling

It works with a tubular motor that allows you to operate the shutter in order to close or open completely, or to the desired position; also, it allows you to adjust the slats at your desire.

External rolling

The slats adjustment let you have a light, temperature and ventilation control as well as an easy cleaning.

Energy saving

LIGHT CONTROL

You can achieve an optimize control of the light by adjusting the slats to the desired position.

VENTILATION

You will be able to have the control of the air at home. This is the best way of air recycling.

OPENS TO THE MAXIMUM

You can adjust the slats up to 100 degrees, so you will be able to easily clean them on both, inside and outside faces.
