PRESSURE LOSS

DN	Kv (m ³ /h)
65	30
80	60
100	96
125	180
150	270
200	600
250 to 500	Contact us

Pressure Loss given for a clean Strainer (absence of clogging, even partial or in-significant)

Our valves are guaranteed for an average fluid velocity in the pipeline of ≤ 2 m/s. Please contact us with the working conditions for any higher speed.

Kv defined according to NF EN 1267
(2mm mesh)

CHEMICAL RESISTANCE

The chemical resistance of the valve is subject to the type of fluid, the temperature, the pressure, as well as the materials and seals of the valve.

Please contact us to have a personalized analysis of the resistance of one of our products to a given fluid

You can also consult, for information only, the table given in ISO 10358. However, this table cannot be considered as a recommendation by SAFI who could not be held liable for the use of this document.
