Fräswerkzeuge für die Trochoidal-Bearbeitung  
End Mills for Trochoidal Machining

## Trochoidales Fräsen

Trochoidales Fräsen ist die Überlagerung einer Kreisbahnbewegung mit einer Linearbewegung und somit die Umsetzung von Nutfräsen in Konturfräsen. Wie beim Schlichten wird der Span mit einer geringen seitlichen Zustellung und größtmöglicher axialer Zustellung (von  $2 \times d_1$  bis  $5 \times d_1$ ) aus dem Werkstück geschält. Durch den kleineren Eingriffswinkel verringert sich die bei der Bearbeitung erzeugte Wärme und die geringere thermische Belastung führt zu einer höheren Standzeit.

Somit lassen sich selbst auf leistungsschwachen Maschinen hohe Zeitspanvolumina generieren und der Verschleiß beim Vollnutfräsen, besonders in schwer zerspanbaren Werkstoffen, wird reduziert. Durch den Einsatz des Fräasers über die volle Schneidenlänge wird der Verschleiß auf die gesamte Schneide verteilt und damit der Standweg des Werkzeugs erhöht.

## Trochoidal milling

Trochoidal milling is the overlapping of a circular path with a linear movement and thus the conversion of slot milling into contour milling. Just as in finishing operations the chip is peeled from the workpiece with a low radial depth of cut and a maximum axial depth of cut ( $2 \times d_1$  to  $5 \times d_1$ ). The small contact angle reduces heat generation during machining and less thermal stress results in a higher tool life.

Thus high metal removal rates can be generated even on low-powered machines and the wear during full slot-milling particularly in difficult to machine materials is reduced. The end mill is used with the entire flute length and as a result the wear is evenly spaced out over the full cutting edge length thus increasing tool life.

### Vorteile des trochoidalen Fräsens

- Besonders für schwer zerspanbare Werkstoffe und dünnwandige Bauteile geeignet
- Werkzeug- und Maschinenbelastung werden reduziert
- Zeitspanvolumen auf leistungsschwachen, dynamischen Maschinen wird erhöht
- Auch bei labiler Werkstückspannung einsetzbar
- Zustelltiefen bis  $5 \times d_1$  möglich
- Mit bis zu 7 Schneiden für eine hocheffiziente Zerspanungsleistung mit hohen Vorschubgeschwindigkeiten

### Advantages of trochoidal milling

- Suitable in particular for difficult to machine materials and thin-walled components
- Stress on tools and machine is reduced
- Increase of metal removal rate on low-powered dynamic machines
- Suitable also with unstable workpiece clamping conditions
- Enables high axial depth of cut up to  $5 \times d_1$
- With up to 7 cutting edges for a highly efficient cutting performance with high feed rates

## Die Werkzeuge

Um den Anforderungen der trochoidalen Zerspanung gerecht zu werden, sind FRANKEN Hartmetall-Schaffräser „Trochoid“ mit vibrationsdämpfenden Merkmalen wie ungleiche Teilung, ungleiche Drallwinkel oder einer neuen Schneidkantengeometrie versehen.

Die neu entwickelten Spanteiler mindern die axiale Auszugskraft des Werkzeugs und reduzieren das Risiko eines Spänestaus in Taschen auf ein Minimum. Die kurzen Späne lassen sich durch Druckluft oder Emulsion leicht entfernen, wodurch ein wiederholtes Durchziehen der Späne verhindert wird.

Neue Hochleistungsschichten und ein abgestimmtes Hartmetallsubstrat runden die Leistungsfähigkeit dieser neuen Werkzeugtypen ab.

## The tools

In order to meet the requirements of trochoidal machining FRANKEN solid carbide end mills "Trochoid" feature low-vibration characteristics such as variable spacing and variable helix angle or a new cutting edge geometry.

The newly developed chip divider reduces the axial pull-out force of the tool and minimizes the risk of chip jams in pockets. The short chips can easily be removed with compressed air or emulsion thus avoiding a repeated pull-through of chips.

New high-performance coatings and an optimally suited carbide substrate round off the performance of these new types of tool.

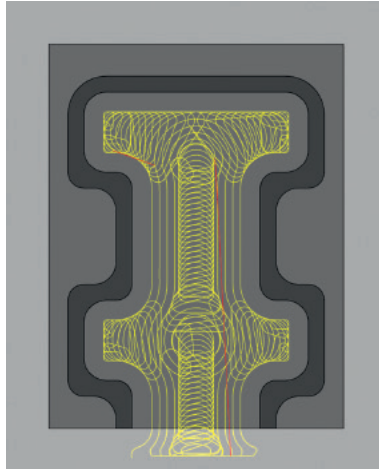

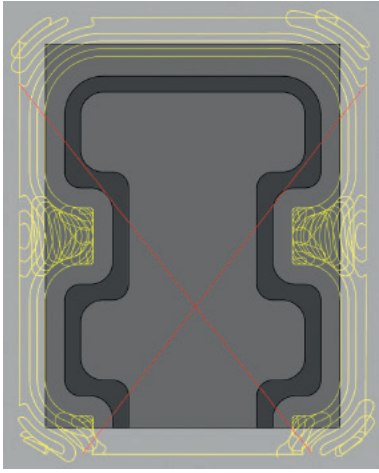

### Vorteile der Werkzeuge

- Schneidengeometrien Jet-Cut für Stahl und TiNox-Cut für INOX
- Jeweils 4 Baulängen ( $2 \times d_1$ ,  $3 \times d_1$ ,  $4 \times d_1$  und  $5 \times d_1$ ) verfügbar
- Spanteilergeometrie zum prozesssicheren Schrumpfen von Taschen und Konturen
- Ausführung TiNox-Cut mit innerer Kühlschmierstoff-Zufuhr ICA
- Spezielle Schneidkantenausführung zur Schwingungsdämpfung
- Vibrationsfreie Bearbeitung durch ungleiche Teilung und ungleiche Drallwinkel
- Neue Hochleistungs-Beschichtungen
- Abgestimmtes Hartmetallsubstrat

### Benefits of the tools

- Cutting geometry Jet-Cut for steel and TiNox-Cut for INOX
- 4 length dimensions available per type ( $2 \times d_1$ ,  $3 \times d_1$ ,  $4 \times d_1$  and  $5 \times d_1$ )
- Chip breaker geometry designed for process-reliable roughing of pockets and contours.
- TiNox-Cut design with internal coolant supply (ICA)
- Special preparation of cutting edges to reduce vibrations
- Low-vibration machining thanks to variable spacing and variable helix angle
- New high-performance coatings
- Optimally suited carbide substrate

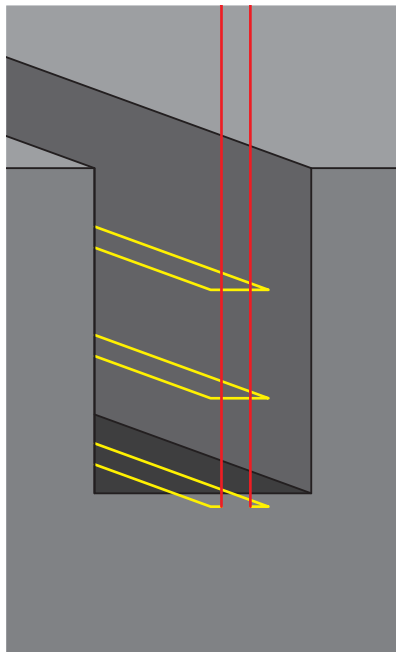

Neue CAD/CAM-Programmiersysteme ermöglichen eine Bearbeitung komplexer Konturen und Taschen in 2D und 3D mit einem Trochoidal-Fräszyklus. Ziel dieser neuen Zyklen ist eine möglichst effektive Berechnung der Fräsbahnen, um Leerwege zu verhindern.

New CAD/CAM-programming systems enable the machining of complex contours and pockets in 2D and 3D with a trochoidal milling cycle. The objective of these new cycles is the optimised calculation of milling paths to avoid unproductive tool motion.

### HPC-Nutenfräsen mit Standard-Schaftfräsern

- Hochleistungswerkzeug zur trochoidalen Bearbeitung
- Neuentwickelte Geometrie mit Spanteilern
- Vibrationsarme Bearbeitung
- Innere Kühlschmierstoff-Zufuhr, Austritt axial (ICA)
- 4 Baulängen verfügbar
- Bearbeitungstiefen bis 5 x d<sub>1</sub> möglich

- High-performance tool for trochoidal machining
- Newly developed geometry with chip breaker
- Low-vibration machining
- Internal coolant supply, axial exit (ICA)
- 4 lengths available
- Axial depths of cut up to 5 x d<sub>1</sub>

Inox

#### Beschichtung · Coating

#### Einsatzgebiete – Material (siehe Seite 6)

- Zum prozesssicheren trochoidalen Schruppen
- Speziell für schwer zerspanbare Werkstoffe geeignet
- In allen zähen Werkstoffen einsetzbar
- Zur Schlichtbearbeitung geeignet

#### Applications – material (see page 6)

- For process-reliable trochoidal roughing operations
- Especially suitable for difficult to cut materials
- For all tough materials
- Suitable for finishing

■ = sehr gut geeignet · very suitable  
□ = gut geeignet · suitable

v<sub>c</sub> = Schnittgeschwindigkeit · Cutting speed  
f<sub>z</sub> = Vorschub pro Zahn · Feed per tooth

- Hochleistungswerkzeug zur trochoidalen Bearbeitung
- Neuentwickelte Geometrie mit Spanteilern
- Vibrationsarme Bearbeitung
- 4 Baulängen verfügbar
- Bearbeitungstiefen bis 5 x d<sub>1</sub> möglich

- High-performance tool for trochoidal machining
- Newly developed geometry with chip breaker
- Low-vibration machining
- 4 lengths available
- Axial depths of cut up to 5 x d<sub>1</sub>

Steel

#### Beschichtung · Coating

#### Einsatzgebiete – Material (siehe Seite 6)

- Zum prozesssicheren trochoidalen Schrappen
- In allen Stahl- und Gusswerkstoffen einsetzbar
- In nahezu allen zähen Werkstoffen einsetzbar
- Zur Schlichtbearbeitung geeignet

#### Applications – material (see page 6)

- For process-reliable trochoidal roughing operations
- For all steel materials and cast materials
- For almost all tough materials
- Suitable for finishing
